# Wireframe - Blog post

# Design process and decisions

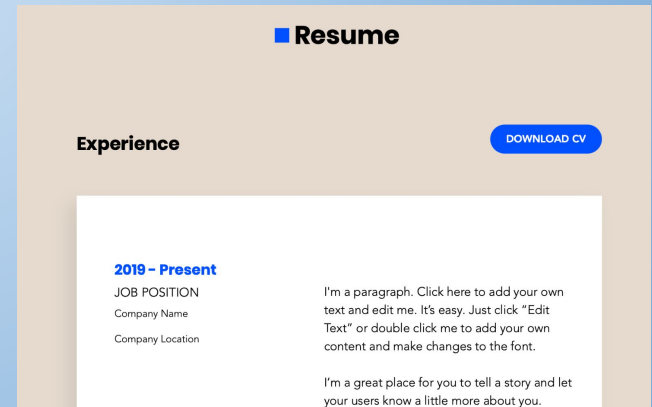

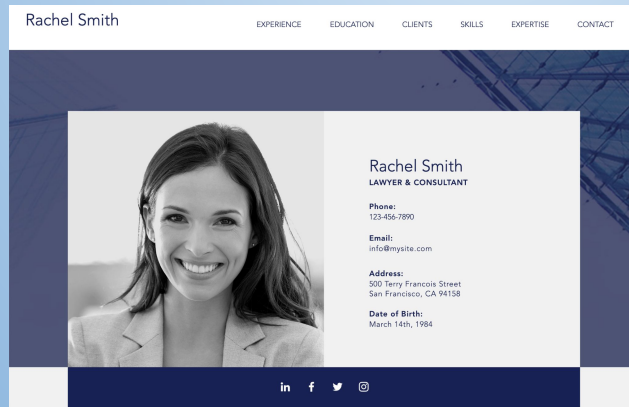

- Review assignment requirements to determine how much content needs to be included in the website at a high level
- Gather ideas from online examples
- Construct wireframe to visualise required content on each page
- Implement wireframes in code
- Evaluate layout via live server and adjust as required

# Design aesthetic

- Colour scheme - light blue and beige - from looking at palettes. I felt these pastel colours look good together and still professional
- Background - static image - adds some 'decorativeness' to the page without being distracting to the content
- Font - Montserrat - looks clean and simple and I felt it goes well with the website
- Inspirations -

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Mauris et.

# Components

- On all pages: Nav bar, 'Back to top' link, Header and footer, External links - to github and linkedin, Buttons - either to other pages or to download resume
- Home: About me section and list of skills
- About: Experience and education sections with brief description, List of skills and interests
- Contact: Email form, Contact details and map
- Blogs: Blog posts

# Review of development process

- Challenges:
  - Deciding on an overall initial design - not sure what I want to include will be achievable with my current skillset
  - Aligning items
  - Making website responsive to different screen sizes
- Favourite part:
  - Animation with pseudo-classes
