

T1A2 - Portfolio

By Nora Sun

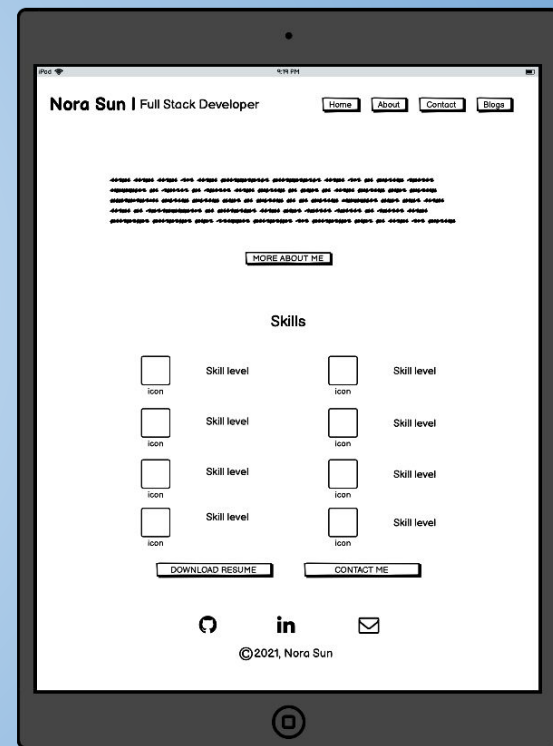

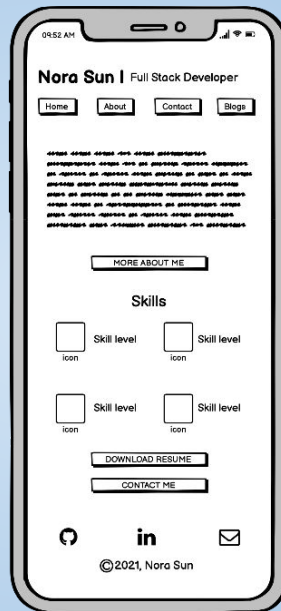

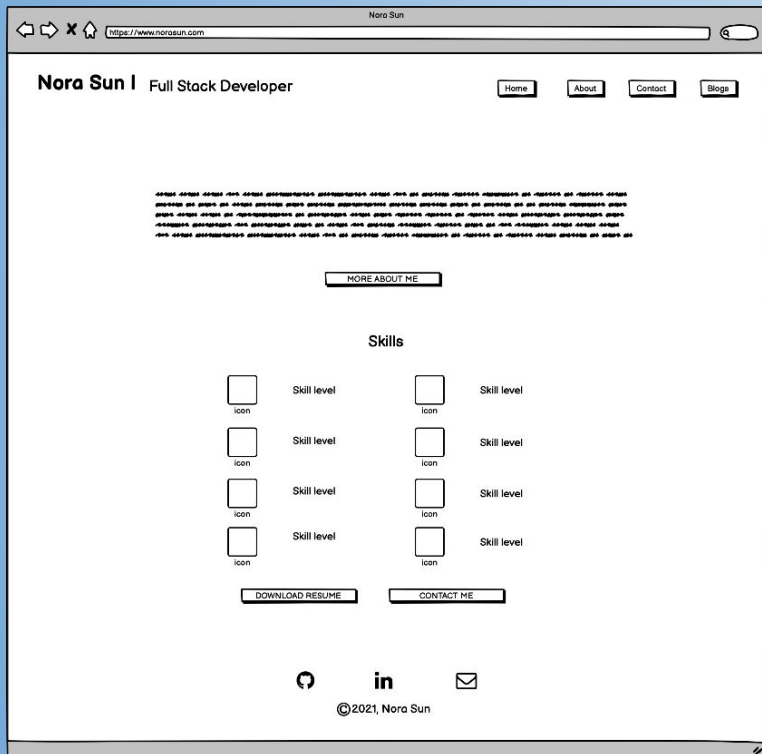

Sitemap

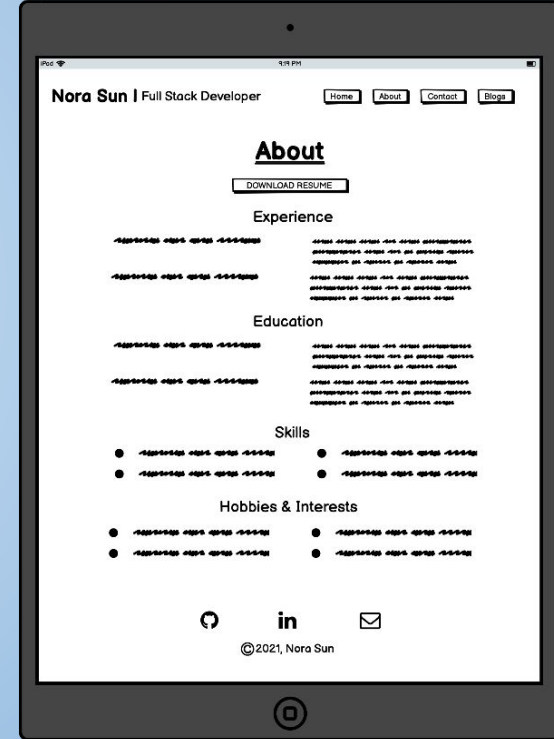

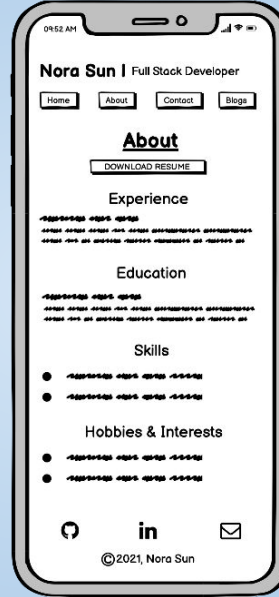

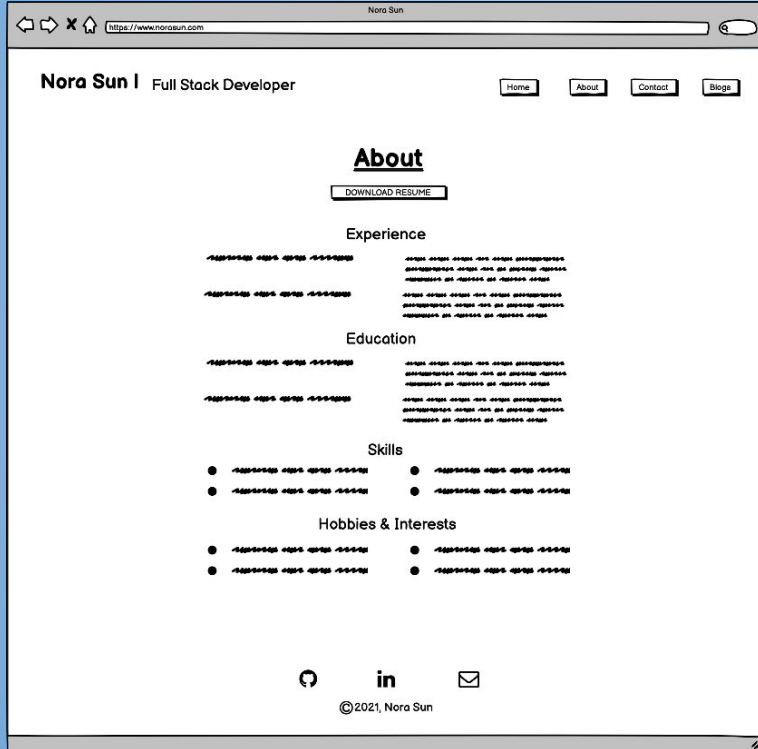

Structure

- All pages - Include navigation bar in header to allow switching between pages and also footer which links to my socials and email (i.e. contact page form)
- Home - Includes brief introduction about me and lists my coding skills and skill level. Buttons linking to About and Contact pages on website and to download resume.
- About - Shows my past work experience and education history. Also lists my professional skills and interests.
- Contact - Includes form for user to contact me and my contact information (samples) including a map of my location.
- Blogs - Previews for blog posts where headings of each post links to the individual blog post.
- Blog posts - Blog content includes picture and text content.

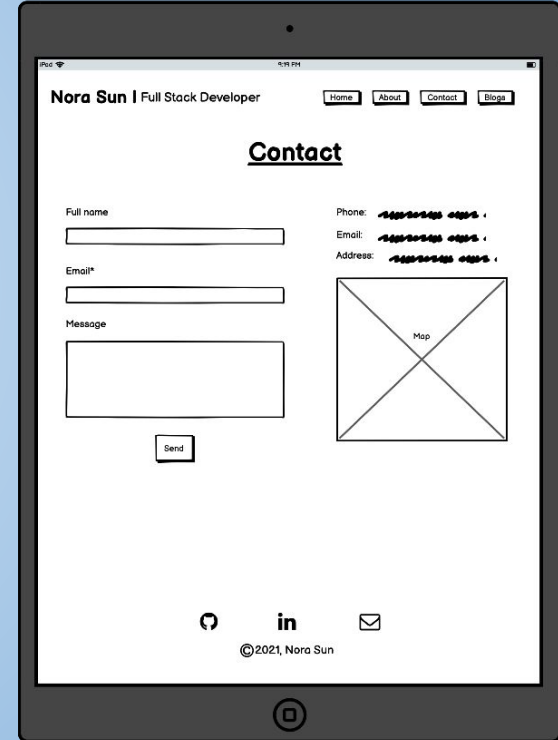

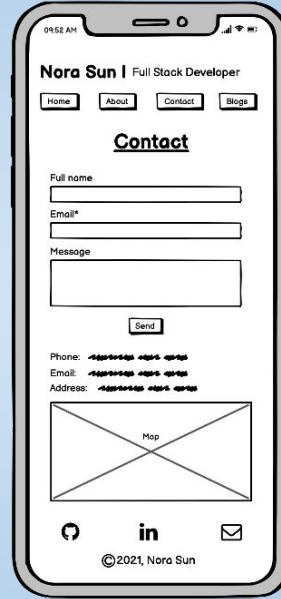

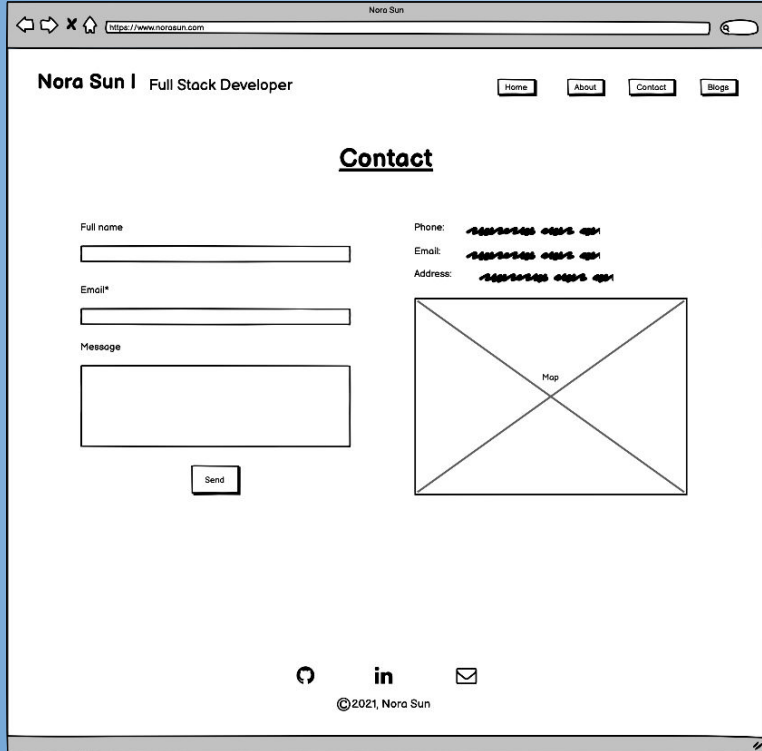

Wireframe - Home

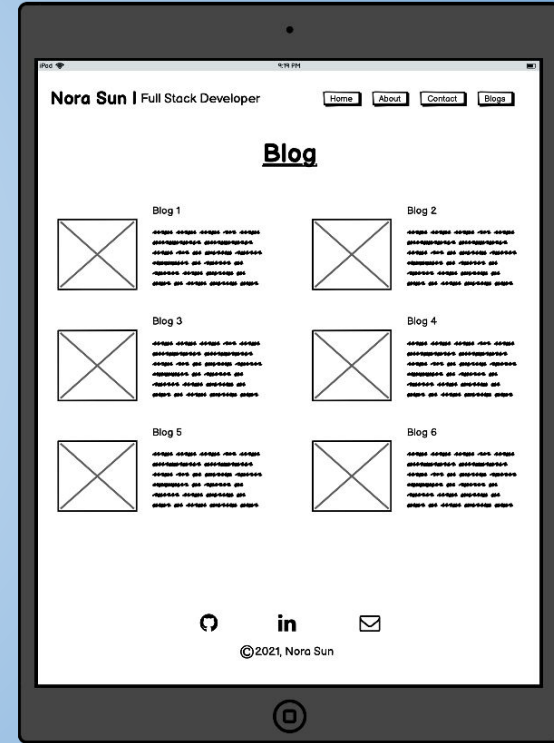

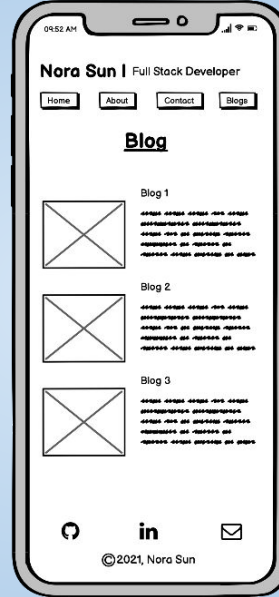

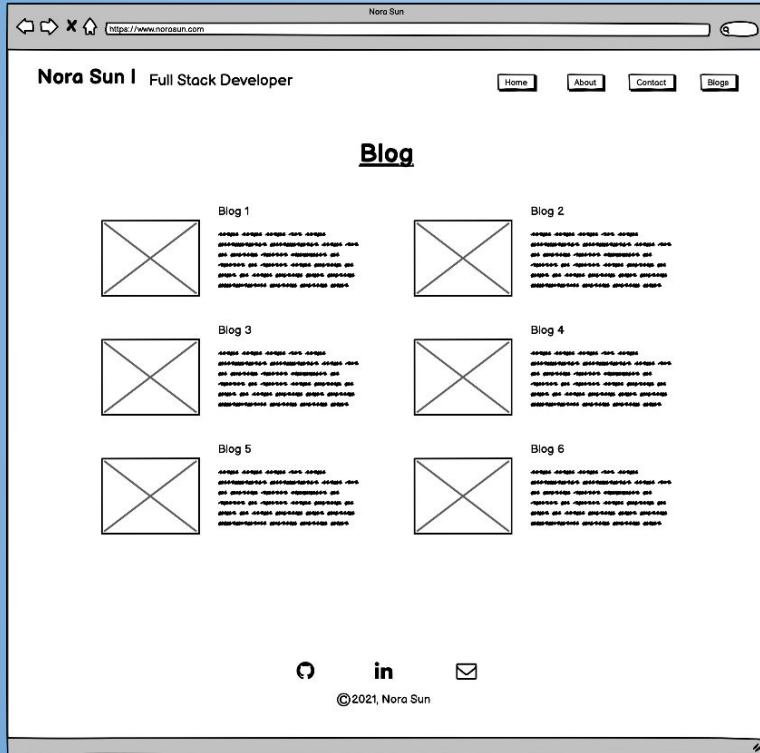

Wireframe - About

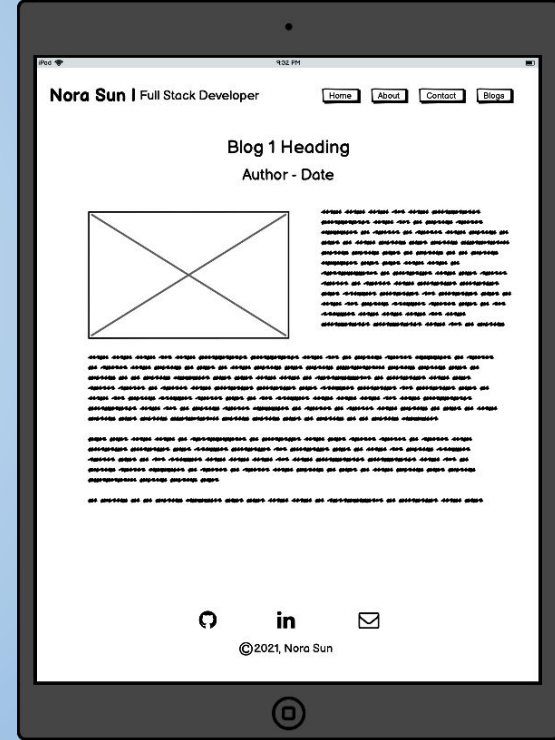

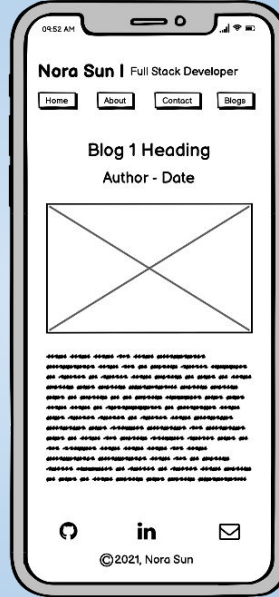

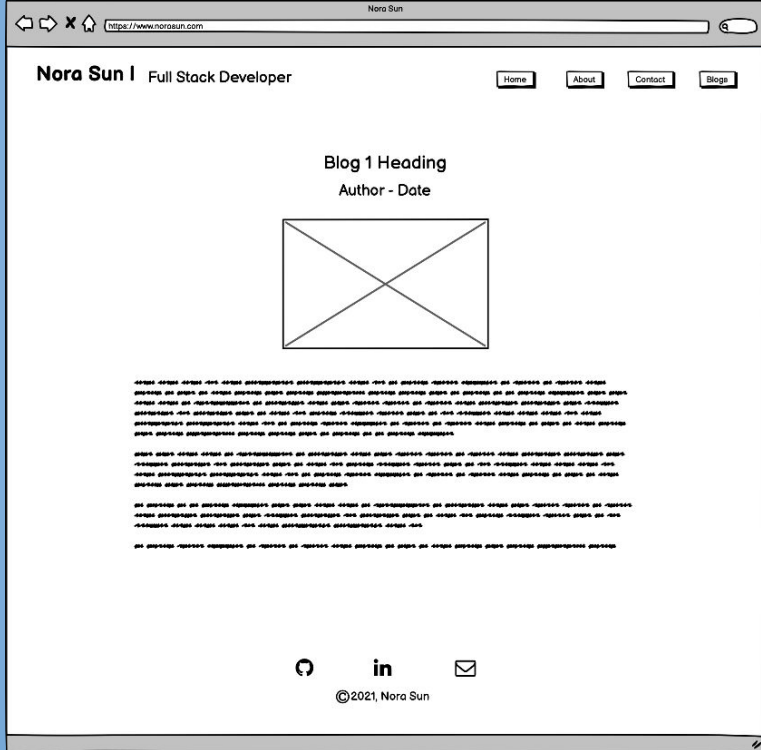

Wireframe - Contact

Wireframe - Blog

Wireframe - Blog post

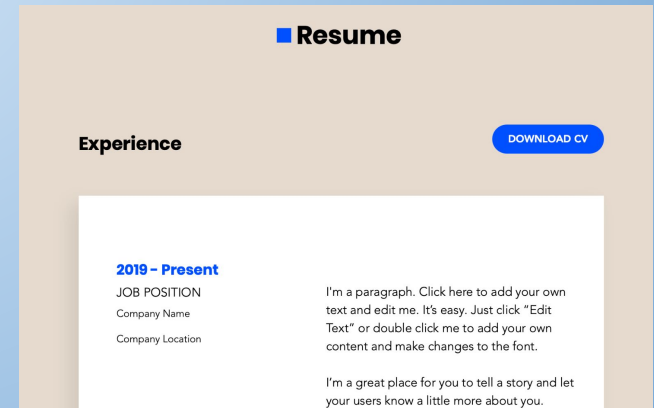

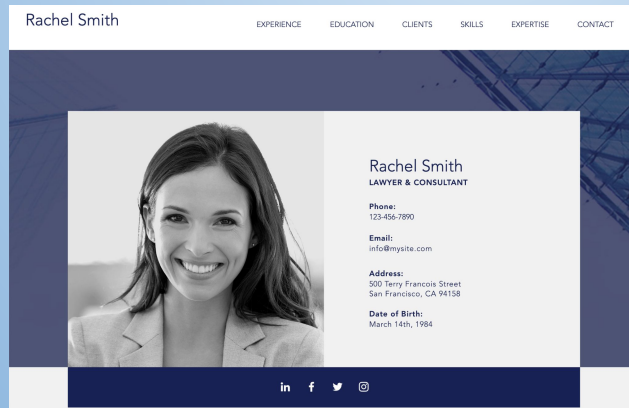

Design process and decisions

- Review assignment requirements to determine how much content needs to be included in the website at a high level
- Gather ideas from online examples
- Construct wireframe to visualise required content on each page
- Implement wireframes in code
- Grouping common elements using mixins
- Evaluate layout via live server and adjust as required
- Deploy website using Netlify

Design aesthetic

- Colour scheme - light blue, beige and white. I felt these colours give a refreshing and clean look while still being professional
- Background - static image - adds some 'decorativeness' to the page without being distracting to the content
- Font - Montserrat - looks clean and simple and I felt it goes well with the website
- Inspirations -

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Mauris et.

Design aesthetic cont.

- Included navigation bar and 'back to top' button on every page to allow ease of navigation
- Added semi-transparent panels behind areas with text to better highlight the text content and increase the contrast so user can read the content better without being distracted by the background image
- Animation added buttons (i.e. colour change when hovered over and pressed effect when clicked) to provide feedback to user that the button is 'clickable' and to better engage user with use of animation

Components

- On all pages: Nav bar, 'Back to top' link, Header and footer, External links - to github and linkedin, Buttons - either to other pages on the website or to download resume
- Home: About me section and list of coding skills
- About: Experience and education sections with brief description, List of skills and interests
- Contact: Email form, Contact details and map
- Blogs: Preview of blog posts with image, heading (linking to individual post), author and date
- Blog posts: Heading, author, date, image and text content

Review of development process

- Challenges:
 - Deciding on an overall initial design - not sure what I want to include will be achievable with my current skill set
 - Aligning items
 - Making website responsive to different screen sizes
- Ethical issues:
 - Accessibility for visually impaired users: Ensuring level of contrast in colour is sufficient
 - Copyright: Images used on website are from 'Unsplash.com' which are free to use.
- Favourite part:
 - Seeing everything come together
 - Animation with pseudo-classes
